1028	Verdesian Life Sciences	Outdo what you've always done. Break through yield barriers with revolutionary inputs engineered for plant health and efficiency. Plant smart - grow wise. Products and technologies designed to help you attain higher yields by helping plants reach their full potential.
445	Vertical Software Inc.	Vertical Software products increase scale traffic, reduce labor and reduce errors. Our Grain ATM machines allow drivers to check themselves in, gather their own gross and tare weight and select the field or farm from which the grain is received. Tenant landlord splits are automatically processed. Integration to the moisture meter and near infrared devices insure that grades are accurately recorded and calculated. Our solutions include features that insure that loads cannot be fabricated and further provide fraud protection that prevents a single load from being processed multiple times. Optionally, an image of the driver and vehicle is captured and stored with the scale ticket. Email notifications are automatically generated to notify management anytime a potentially fraudulent transaction is recorded. This solution may be coupled with the GrainTrac commodity accounting solution or used as a front end package with transactions posted to most popular accounting systems. These products will revolutionize how commodities will be received and shipped. Fewer employees are required to operate the scale, the wrong truck is never weighed on a scale ticket, the solution provides positive identification of the truck on the scale and there is great fraud protection. The ROI on these products may be as short as 1 year. Vertical Software, Inc., Patrick Gilroy cell # 309-678-1823 pat@verticalsoftware.net website: www.verticalsoftware.net
